James Lee Anderson

EPOGEN Injection: Treats Anemia or Low Number of Red Blood Cells James Lee Anderson
“Although, your health condition may impact your everyday life, do not let it define who you are.” EPOGEN (epoetin alfa) injection is a man-made version of human erythropoietin (EPO). EPO is produced naturally in the body, mostly by the kidneys. It stimulates the bone marrow to produce red blood cells. If the body does not produce enough EPO, severe anemia can occur. This often occurs in patients whose kidneys are not working properly. EPOGEN (epoetin alfa) is used to treat severe anemia in patients with kidney disease. Epoetin may also be used to prevent or treat anemia that is caused by surgery or medicines that are used for other conditions, such as AIDS or cancer. This medicine is available only with your doctor's prescription. Thanks and may you have a good understanding about this drug—EPOGEN. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
