Diabetes and Ocular Disease: Past, Present, and Future Therapies: 14 (American Academy of Ophthalmology Monograph Series)

Diabetes and Ocular Disease: Past, Present, and Future Therapies: 14 (American Academy of Ophthalmology Monograph Series)
Diabetes mellitus is a complex, multifactorial disease that is often associated with progressive retinopathy and visual loss. In this book, Drs. Scott, Flynn, and Smiddy have compiled the current basic science and clinical information from leading authorities on diabetic eye disease. They have also included the results of clinical trials in patients with diabetic retinopathy, as well as the guidelines established by collaborative studies and the concepts of disease mechanisms and clinical management that have subsequently evolved from those guidelines. This monograph will provide practitioners with a concise, up-to-date, practical reference for the diagnosis and management of ocular disease in diabetic patients.
