Reproduction and Development in Mollusca (Reproduction and Development in Aquatic Invertebrates)

T. J. Pandian

Reproduction and Development in Mollusca (Reproduction and Development in Aquatic Invertebrates) T. J. Pandian

Molluscs are comprised of edible abalones, snails, mussels, oysters, cuttlefish, and squids. Since there are over 100,000 different species of molluscan, it is not surprising that their reproductive processes are extremely varied. With chapters focusing on sexual and asexual reproduction, aestivation, and how to determine sex, **Reproduction and Development in Mollusca** will be a valuable tool for marine biologists studying the endogenic biosynthesis and sexual differentiation of molluscans.
