Satellite Positioning Systems for Aviation

Walter Blanchard

Satellite Positioning Systems for Aviation Walter Blanchard
The aim of this book is to describe how satnav systems are designed and work, especially from the aviation viewpoint, without getting too heavily involved in mathematics and electronic engineering. It does, however, assume some knowledge of elementary maths, physics and electronics, and a nodding acquaintance with navigational terminology. It is written for the satnav user who wishes to explore the subject more deeply than simply knowing which knob to twiddle, and also to provide technical background material for the increasing number of non-specialists having to deal with GNSS and its implementation. The book starts with a short description of basic navigational position-finding techniques. GPS, differential GPS and GLONASS are described in some detail, and commercial systems such as Euteltracs, Iridium and Starfix are included. The problems encountered in using satellite-positioning technology for aviation purposes are covered, and there are sections on integrity, monitoring by ground stations (GAIT), built into the receiver (RAIM), and augmentations such as the American WAAS.

From reader reviews:

Elizabeth Parker:

Do you have favorite book? For those who have, what is your favorite's book? E-book is very important thing for us to know everything in the world. Each e-book has different aim or perhaps goal; it means that book has different type. Some people really feel enjoy to spend their a chance to read a book. They can be reading whatever they get because their hobby will be reading a book. Consider the person who don't like reading a book? Sometime, person feel need book if they found difficult problem as well as exercise. Well, probably you will need this Satellite Positioning Systems for Aviation.

John Bennett:

Now a day folks who Living in the era everywhere everything reachable by talk with the internet and the resources inside it can be true or not call for people to be aware of each info they get. How a lot more to be smart in getting any information nowadays? Of course the reply is reading a book. Examining a book can help men and women out of this uncertainty Information mainly this Satellite Positioning Systems for Aviation book since this book offers you rich info and knowledge. Of course the information in this book hundred per cent guarantees there is no doubt in it you may already know.

Kenny Crowther:

This Satellite Positioning Systems for Aviation is great guide for you because the content and that is full of information for you who have always deal with world and have to make decision every minute. This kind of book reveal it facts accurately using great organize word or we can claim no rambling sentences included. So if you are read it hurriedly you can have whole info in it. Doesn't mean it only will give you straight forward sentences but challenging core information with splendid delivering sentences. Having Satellite Positioning Systems for Aviation in your hand like finding the world in your arm, data in it is not ridiculous just one. We can say that no e-book that offer you world inside ten or fifteen tiny right but this publication already do that. So , this can be good reading book. Hello Mr. and Mrs. busy do you still doubt this?

Teresa Bradshaw:

As we know that book is significant thing to add our expertise for everything. By a book we can know everything we would like. A book is a pair of written, printed, illustrated or even blank sheet. Every year had been exactly added. This publication Satellite Positioning Systems for Aviation was filled concerning science. Spend your spare time to add your knowledge about your scientific research competence. Some people has various feel when they reading a new book. If you know how big benefit of a book, you can experience enjoy to read a guide. In the modern era like today, many ways to get book that you wanted.
